

ERP IMPLEMENTATION COMPILATION

Internship Presentation

Enterprise Resource Planning

Candidate: Kamna Kashyap

Roll No.: 2410031671

IILM University, Greater Noida, U.P.

B.Tech CSE | Batch 2024-2028

Internship Duration: 4 Weeks

Internship Domain

Duration

Internship Focus

Understanding the ERP implementation lifecycle, business-process integration, data management, testing, training, security, deployment and post-go-live improvement.

4 Weeks

Introduction to ERP

Enterprise Resource Planning (ERP) is an integrated information system used to manage core organizational processes.

ERP connects departments such as finance, procurement, inventory, human resources, sales and operations.

A shared data environment reduces duplication and improves information consistency.

ERP implementation combines technology deployment with business-process improvement and organizational change.

The overall goal is better visibility, control, efficiency and decision-making.

Major ERP Modules

Finance

Accounting,
budgeting, reporting

HR

Employee records,
payroll, attendance

Procurement

Purchasing,
suppliers, approvals

Inventory

Stock, warehouse,
material movement

Sales

Orders, delivery,
invoicing

Production

Planning, work
orders, materials

CRM

Customers, leads,
service

Supply Chain

Planning, logistics,
distribution

ERP Implementation Life Cycle

1. Initiation

Scope, goals & governance

2. Requirements

Business & user needs

3. Process Design

Future-state workflows

4. Configuration

Modules & workflows

5. Data Migration

Clean, map & load

6. Integration

Connect systems

7. Testing

Validate end-to-end

8. Training

Prepare users

9. Go-Live

Controlled deployment

10. Stabilization

Support & optimize

Data Migration & Integration

Data Migration

- Identify master and transactional data
- Profile and cleanse legacy records
- Map legacy fields to ERP fields
- Perform trial migrations
- Reconcile and validate results
- Obtain business-owner sign-off

System Integration

- Connect ERP with external applications
- Define interfaces and data flows
- Validate inbound and outbound transactions
- Monitor errors and exceptions
- Maintain integration documentation
- Test end-to-end business scenarios

Testing, Training & Change Management

Testing

- Unit testing
- System testing
- Integration testing
- Performance testing
- Security testing
- User Acceptance Testing (UAT)

Training

- Role-based training
- Process walkthroughs
- Hands-on practice
- User guides
- Support preparation
- Post-go-live assistance

Change Management

- Stakeholder engagement
- Clear communication
- Leadership support
- Feedback channels
- Resistance management
- Continuous improvement

Security & Risk Management

Use role-based access control and the principle of least privilege.

Apply segregation of duties for sensitive financial and operational transactions.

Maintain approval workflows and audit trails.

Review user access periodically and remove unnecessary permissions.

Protect data through backup, recovery and continuity arrangements.

Manage implementation risks through clear scope, testing, data quality controls and structured support.

Benefits of ERP Implementation

Integration

Connected departments and shared information

Efficiency

Less duplication and manual reconciliation

Visibility

Faster access to operational and management information

Control

Improved approvals, traceability and accountability

Planning

Better inventory, resource and demand planning

Scalability

Foundation for growth and future integrations

Illustrative ERP Implementation Plan

Phase 1

Phase 2

Phase 3

Phase 4

Phase 5

Phase 6

Phase 7

Project initial

Current-state

Future-state

Configuration

Data migrati

Training, cut

Stabilization

Key Performance Indicators (KPIs)

Data Accuracy

Validated records without critical errors

Order Processing Time

Average time from order entry to completion

Procurement Cycle Time

Time from request to approved purchase order

Inventory Accuracy

System stock compared with physical stock

User Adoption

Active use of required ERP processes

System Availability

Percentage of time ERP is operational

Conclusion & Future Scope

ERP implementation is a business transformation initiative involving people, processes, data and technology.

Successful projects require clear objectives, governance, quality data, testing, training and post-go-live support.

Future ERP environments are increasingly supported by cloud platforms, analytics, automation, APIs and AI-enabled capabilities.

Continuous improvement and KPI monitoring help organizations sustain the value of ERP after go-live.

Final Takeaway

Integrated information + standardized processes + effective change management = sustainable ERP value.

THANK YOU

ERP Implementation Compilation
